# **TECHNICAL MANUAL**

## NOTICE

This manual should be retained in a convenient location for future reference.

A wiring diagram for this appliance is located on the inside of the right side panel.

Post in a prominent location, instructions to be followed in event user smells gas. This information shall be obtained by consulting the local gas supplier.

Do not obstruct the flow of combustion and ventilation air. Adequate clearance must be left all around appliance for sufficient air to the combustion chamber.

The Model OFG/OGA-32X open fryer is equipped with a continuous pilot. But the open fryer can not be operated without electric power. The unit will automatically return to normal operation when power is restored.

## CAUTION

*To avoid a fire, keep appliance area free and clear from combustibles.*

**Improper installation, adjustment, alteration, service or maintenance can cause property damage, injury or death. Read the installation, operating and maintenance instructions thoroughly before installing or servicing this equipment.**

**FOR YOUR SAFETY, DO NOT STORE OR USE GASOLINE OR OTHER FLAMMABLE VAPORS AND LIQUIDS IN THE VICINITY OF THIS OR ANY OTHER APPLIANCE.**

## SECTION 1. TROUBLESHOOTING

### **1-1. INTRODUCTION**

This section provides troubleshooting information in the form of an easy to read table.

If a problem occurs during the first operation of a new fryer, recheck the Installation Section of the Operator's Manual.

Before troubleshooting, always recheck the Operation Section of the Operator's Manual.

### **1-2. SAFETY**

Where information is of particular importance or is safety related, the words DANGER, WARNING, CAUTION, or NOTE are used. Their usage is described on the next page:

SAFETY ALERT SYMBOL is used with DANGER, WARNING or CAUTION which indicates a personal injury type hazard.

**NOTICE**

NOTICE is used to highlight especially important information.

**CAUTION**

*CAUTION used without the safety alert symbol indicates a potentially hazardous situation which, if not avoided, may result in property damage.*

**CAUTION**

*CAUTION used with the safety alert symbol indicates a potentially hazardous situation which, if not avoided, could result in minor or moderate injury.*

**WARNING**

WARNING indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

**DANGER**

**DANGER INDICATES AN IMMINENTLY HAZARDOUS SITUATION WHICH, IF NOT AVOIDED, WILL RESULT IN DEATH OR SERIOUS INJURY.**

### **1-3. TROUBLESHOOTING**

To isolate a malfunction, proceed as follows:

1. Clearly define the problem, or symptom and when it occurs.
2. Locate the problem in the troubleshooting table.
3. Review all possible causes, then one at a time, work through the list of corrections until the problem is solved.

**If maintenance procedures are not followed correctly, injuries and/or property damage could result.**

PROBLEM	CAUSE	CORRECTION
With the switch in the POWER position, fryer is completely inoperative	<ul style="list-style-type: none"> <li>• Open circuit</li> </ul>	<ul style="list-style-type: none"> <li>• Check to see if unit is plugged in</li> <li>• Check breaker or fuse at supply box</li> <li>• Check POWER switch per Power Switch Section; replace if defective</li> <li>• Check voltage at wall receptacle</li> <li>• Check cord and plug</li> </ul>
Shortening will not heat but lights are on	<ul style="list-style-type: none"> <li>• Faulty contactor (elec. model)</li> <li>• Faulty gas control valve (gas model)</li> <li>• Faulty temperature probe</li> <li>• Faulty high limit</li> <li>• Faulty drain switch</li> </ul>	<ul style="list-style-type: none"> <li>• Check contactor per Heating Contactors Section</li> <li>• Check gas control valve per Gas Control Valve Assembly Section</li> <li>• Check temperature probe per Temperature Probe Replacement Section; "E-6A or B"</li> <li>• Check high limit per the appropriate High Temperature Limit Control Section; "E-10"</li> <li>• Check drain switch per Drain Microswitch Section; "E-15"</li> </ul>

**1-3. TROUBLESHOOTING(Continued)**

PROBLEM	CAUSE	CORRECTION
Heating of shortening too slow	<ul style="list-style-type: none"> <li>• Low or improper voltage (elec. unit)</li> <li>• Weak or burnt out elements (elec. unit)</li> <li>• Wire(s) loose</li> <li>• Burnt or charred wire connection</li> <li>• Faulty contactor</li> <li>• Supply line too small - low gas volume (gas unit)</li> <li>• Improper ventilation</li> </ul>	<ul style="list-style-type: none"> <li>• Use a meter and check the receptacle voltage against the data plate</li> <li>• Check heating elements per Heating Elements Section</li> <li>• Tighten</li> <li>• Replace wire and clean connectors</li> <li>• Check contactor per Heating Contactors Section</li> <li>• Increase supply line size; refer to Installation Section of Operator's Manual</li> <li>• Refer to Installation Section of Operator's Manual</li> </ul>
Shortening overheating	<ul style="list-style-type: none"> <li>• Temperature probe needs calibration</li> <li>• Mercury contactor stuck closed</li> <li>• Bad control board</li> </ul>	<ul style="list-style-type: none"> <li>• Calibrate temperature probe if <math>\pm 10^\circ</math> off; if more than <math>\pm 10^\circ</math> off, replace temperature probe</li> <li>• Check mercury contactor for not opening; replace if necessary (elec. unit)</li> <li>• Replace control board if heat indicator stays on past ready temperature</li> </ul>
Foaming or boiling over of shortening	<ul style="list-style-type: none"> <li>• Water in shortening</li> <li>• Improper or bad shortening</li> <li>• Improper filtering</li> <li>• Improper rinsing after cleaning fryer</li> </ul>	<ul style="list-style-type: none"> <li>• At end of cook cycle, drain shortening and clean</li> <li>• Use recommended shortening</li> <li>• Refer to the Filtering the Shortening Section in Operator's Manual</li> <li>• Clean and rinse the frypot; then dry thoroughly</li> </ul>

### 1-3. TROUBLESHOOTING (Continued)

PROBLEM	CAUSE	CORRECTION
Shortening will not drain from frypot	<ul style="list-style-type: none"> <li>• Drain valve clogged with crumbs</li> <li>• Drain valve will not open by turning handle</li> </ul>	<ul style="list-style-type: none"> <li>• Open valve, force cleaning brush through drain</li> <li>• Replace cotter pins in valve coupling</li> </ul>
Filter motor runs but pumps shortening slowly	<ul style="list-style-type: none"> <li>• Pump clogged</li> <li>• Filter line connection loose</li> <li>• Solidified shortening in lines</li> </ul>	<ul style="list-style-type: none"> <li>• Remove pump cover and clean</li> <li>• Tighten all filter line connections</li> <li>• Clear all filter lines of solidified shortening</li> </ul>
Filter switch on but motor does not run	<ul style="list-style-type: none"> <li>• Defective switch</li> <li>• Defective motor</li> <li>• Motor thermal protector tripped</li> </ul>	<ul style="list-style-type: none"> <li>• Check/replace switch per Filter Switch Section</li> <li>• Check/replace motor</li> <li>• Reset thermal switch on filter motor</li> </ul>
Motor hums but will not pump	<ul style="list-style-type: none"> <li>• Clogged lines or pump</li> </ul>	<ul style="list-style-type: none"> <li>• Remove and clean pump and lines</li> <li>• Replace pump seal, rotor and rollers</li> </ul>

## **1-4. ERROR CODES**

In the event of a control system failure, the digital display shows an error message. These messages are coded: “E-4”, “E-5”, “E-6A”, “E-6B”, “E-10”, “E-15”, “E-20”, “E-31”, “E-41”, “E-46”, and “E-92”. A constant tone is heard when an error code is displayed, and to silence this tone, press any button.

DISPLAY	CAUSE	PANEL BOARD CORRECTION
“E-4”	Control board overheating	Turn switch to OFF position, then turn switch back to ON; if display shows “E-4”, the control board is getting too hot; check the louvers on each side of the unit for obstructions
“E-5”	Shortening overheating	Turn switch to OFF position, then turn switch back to ON; if display shows “E-5”, the heating circuits and temperature probe should be checked
“E-6A”	Temperature probe open	Turn switch to OFF position, then turn switch back to ON; if display shows “E-6A” the temperature probe should be checked
“E-6B”	Temperature probe shorted	Turn switch to OFF position, then turn switch back to ON; if display shows “E-6B” the temperature probe should be checked to replace, per Temperature Probe Replacement Section
“E-10”	High limit	Reset the high limit by manually pushing up on the red reset button; if high limit does not reset, high limit must be replaced per High Limit Temperature Control Section
“E-15”	Drain switch failure	Close drain, using the drain valve handle; if display still shows “E-15”, check the drain microswitch per Drain Microswitch Section
“E-41”, “E-46”	Programming failure	Turn switch to OFF, then back to ON. If display shows any of the error codes, try to reinitialize the control (Special Program Mode Section of Operator’s Manual). If error Code persists, replace the control panel per Complete Control Panel Replacement Section

## **1-4. ERROR CODES**

**(Continued)**

<b>DISPLAY</b>	<b>CAUSE</b>	<b>PANEL BOARD CORRECTION</b>
“E-20A”	Vacuum switch failure (stuck closed)	Press the timer button to try the ignition process again, and if “E-20A” persists, check the air switch per Vacuum Switch Section
“E-20B”	Draft fan or vacuum switch failure (stuck open)	Press the timer button to try the ignition process again, and if “E-20B” persists, check the vacuum switch per Vacuum Switch Section or the blower motor per Blower Motor Assembly Section
“E-20C”	Ignition modules not responding	Press the timer button to try the ignition process again; if “E-20C” persists, check the ignition module per Ignitor Module Section or the spark ignitor per Pilot/Ignitor Assembly Section, or the I/O board per I/O Power Supply Boards Assembly Section
“E-20D”	Pilots not lit or no flame sense	Press the timer button to try the ignition process again; if “E-20D” persists, check the ignition module per Ignitor Module Section, or the I/O board per I/O Power Supply Boards Assembly Section, or the flame sensor per Flame Sensor Section
“E-31”	Fan switch jumper wire missing	Check for jumper wire on 12-pin connector & add if missing
“E-47”	Analog converter chip or 12 volt supply failure	Turn switch to OFF, then back to ON; if “E-47” persists, replace the I/O board, or the PC board; if speaker tones are quiet, probably I/O board failure
“E-48”	Input system error	Replace PC board
“E-70”	Faulty POWER switch or switch wiring; faulty I/O board	Check POWER switch checked, along with its wiring; replace input/output board if necessary
“E-92”	24 VAC fuse on I/O open	Check for shorted component in 24 volt circuit; (i.e., high limit, drain switch, vacuum switch)

## SECTION 2. MAINTENANCE

### **2-1. INTRODUCTION**

This section provides procedures for the checkout and replacement of the various parts used within the fryer. Before replacing any parts, refer to the Troubleshooting Section. It will aid you in determining the cause of the malfunction.

### **2-2. MAINTENANCE HINTS**

1. You may need to use a multimeter to check the electric components.
2. When the manual refers to the circuit being closed, the multimeter should read zero unless otherwise noted.
3. When the manual refers to the circuit being open, the multimeter will read infinity.

### **2-3 HIGH TEMPERATURE LIMIT CONTROL (Gas Units)**

The high temperature limit control is a safety, manual reset control that senses the temperature of the shortening. If the shortening temperature exceeds 425°F (218°C), this switch will open and shut off heat to the frypot. When the temperature of the shortening drops to a safe operation limit, the control must be manually reset by pressing the red reset button. The red reset button is located under the control panel, in the front of the fryer. This will allow heat to be supplied to the frypot once again.

Before replacing a high temperature limit control, check to see that its circuit is closed.

#### **NOTICE**

The shortening temperature must be below 380°F (193°C) to accurately perform this check.

#### **Checkout:**

1. Remove electrical power supplied to fryer.

To avoid electrical shock or property damage, move the POWER switch to OFF and disconnect main circuit breaker, or unplug cord at wall receptacle.

2. Remove the control panel.

## **2-3 HIGH TEMPERATURE LIMIT CONTROL** **(Continued)**

3. Remove the two nuts securing the high limit bracket to the unit and pull the bracket from the unit.
4. Remove the two screws securing the high limit to the bracket, and remove the high limit from the bracket.
5. Remove the two electrical wires from the high temperature limit control.
6. Manually reset the control, then check for continuity between the two terminals after resetting the control. If the circuit is open, replace the control, then continue with this procedure. (If the circuit is closed, the high limit is not defective. Re-connect the two electrical wires.)

### **Replacement:**

**To avoid electrical shock or property damage, move the POWER switch to OFF and disconnect main circuit breaker, or unplug cord at wall receptacle.**

1. If the tube is broken or cracked, the control will open, shutting off electrical power to the heat circuit. The control cannot be reset, and it will continuously click when pushed.
2. Drain the shortening from the frypot and discard. A substance in the tube could contaminate the shortening.
3. Remove the control panel.
4. Loosen small inside screw nut on capillary tube.

**2-3 HIGH TEMPERATURE  
LIMIT CONTROL**  
**(Continued)**

5. Remove the bracket from the heat tube covering the high limit bulb.
6. Straighten the capillary tube behind the pot wall.
7. Pull the high limit bulb through the retainers on the heat tube.
8. Remove the larger outside nut that threads into the pot wall.
9. Remove the defective high limit from the control panel area.
10. Insert new high limit into bracket and replace wires.
11. Uncoil capillary line, starting at capillary tube, and insert through frypot wall.

**To avoid electrical shock or other injury, run the capillary line under and away from all electrical power wires and terminals. The tube must never be in such a position where it could accidentally touch the electrical power terminals.**

12. Insert capillary line through brackets on heat tube, and then pull back through pot wall until capillary bulb is secure in brackets.
13. Pull excess capillary line from pot and tighten nut into frypot wall.
14. With excess capillary line pulled out, tighten smaller nut.
15. Replace bracket on heat tube covering the high limit bulb.
16. Replace front panel.
17. Refill frypot with shortening.

## **2-4. COMPLETE CONTROL PANEL REPLACEMENT**

Should the control board become inoperative, follow these instructions for replacing the board.

1. Remove electrical power supplied to the unit.

**To avoid electrical shock or property damage, move the POWER switch to OFF and disconnect main circuit breaker, or unplug cord at wall receptacle.**

2. Remove the four screws securing the control panel and lift out.
3. Unplug the wire connectors going to the control board.
4. Install new control panel in reverse order.

*When plugging connectors onto new control panel, be sure the connectors are inserted onto all of the pins, and that the connectors are not forced onto the pins backwards. If not connected properly, damage to the board could result.*

## **2-5. POWER SWITCH**

1. Remove electrical power supplied to fryer.

**To avoid electrical shock or property damage, move the POWER switch to OFF and disconnect main circuit breaker, or unplug cord at wall receptacle.**

2. Remove control panel.
3. Label and remove the wires from the switch. With test instrument, check across the terminals of the switch with the switch in the ON position, then in the OFF position. With the switch in the ON position, the circuit should be closed. With the switch in the OFF position, the circuit should be open. If the switch checks defective, replace by continuing with this procedure.

## **2-5. POWER SWITCH (Continued)**

4. With control panel removed, and the wires off the switch, push in on tabs on the switch to remove from panel.
5. Replace with new switch, and reconnect wires to switch.
6. Replace the control panel.

## **2-6. TEMPERATURE PROBE REPLACEMENT**

The temperature probe relays the actual shortening temperature to the control board. If it becomes disabled, "E-6B" will show in the display. Also, if the shortening temperature is out of calibration by more than 10°F or C°, the temperature probe should be replaced. An Ohm check can be performed also. See chart on page 2-7.

1. Remove electrical power supplied to the fryer.

**To avoid electrical shock or property damage, move the power switch to OFF and disconnect main circuit breaker, or unplug cord at wall receptacle.**

**Electric**

2. Drain the shortening from the frypot.

3. Remove the control panel.

**Gas**

4. Using a 1/2" wrench, remove the nut on the compression fitting.

5. Remove the temperature probe from the frypot.

6. Follow the appropriate instructions, on the following page, depending upon the type of fryer, gas or electric.

**2-6. TEMPERATURE PROBE  
REPLACEMENT**  
**(Continued)**

**ELECTRIC**

**PROBE INSTALLATION INSTRUCTIONS**

Insert probe to 1/8 inch from the outer surface of the elements. It must not extend beyond this or the basket will catch and bend it. If not extended far enough into the pot, the temperature readings will be lower than the actual oil temperature.

Do not overtighten the compression nut. Overtightening can cause the ferrule to distort the probe sheath.

**GAS**

**NOTE:**

- 1.) LOCATE TEMPERATURE PROBE THRU POT WALL.
- 2.) PLACE GAUGE AGAINST POT WALL AS SHOWN.
- 3.) PUSH TEMPERATURE PROBE THRU UNTIL IT MAKES CONTACT WITH GAUGE.
- 4.) TIGHTEN TEMPERATURE PROBE IN PLACE.

**2-6. TEMPERATURE PROBE  
REPLACEMENT**  
**(Continued)**

7. Tighten the compression nut hand tight and then a half turn with wrench.

**CAUTION**

*Excess force will damage temperature probe.*

8. Connect new temperature probe to PC board and replace control panel.
9. Replace shortening.

10. Turn power on and check out fryer.

Temp. F	Temp. C	Resistance Ohms	Temp. F	Temp. C	Resistance Ohms

## **2-7. FLAME SENSOR (Gas Units)**

The flame sensor recognizes the pilot flame and allows gas to continue to the pilot. The flame sensor must send a minimum of two (2) micro amps to the ignition module. The pilot flame should be split in two by the flame sensor, causing the flame sensor to be bright red in color.

1. Remove electrical power supplied to the unit.

**To avoid electrical shock or property damage, move the POWER switch to OFF and disconnect main circuit breaker, or unplug cord at wall receptacle..**

2. To access flame sensor, open the filter doors in the front of the unit. Follow the small gauge yellow wire running to the sensor behind the pilot assembly.
3. Disconnect the flame sense wire from the flame sensor.
4. Using a pair of needle nosed pliers, pull the flame sensor out of the pilot assembly bracket.
5. Insert new flame sensor and reconnect flame sensor wire.
6. Turn power on and check fryer.

## **2-8. PILOT / IGNITOR ASSEMBLY**

The Henny Penny open fryer (gas) has electronic spark ignition that lights a standing pilot. The gap between the spark electrode and the pilot hood should be set at 1/8 of an inch.

1. Remove electrical power supplied to the unit.

To avoid electrical shock or property damage, move the POWER switch to OFF and disconnect main circuit breaker, or unplug cord at wall receptacle.

**TO AVOID PERSONAL INJURY OR PROPERTY DAMAGE, BEFORE STARTING THIS PROCEDURE, MOVE THE MAIN POWER SWITCH TO THE OFF POSITION. DISCONNECT THE MAIN CIRCUIT BREAKERS AT THE CIRCUIT BREAKER BOX OR UNPLUG SERVICE CORD FROM WALL RECEPTACLE. TURN OFF THE MAIN GAS SUPPLY TO THE FRYER AND DISCONNECT AND CAP THE MAIN SUPPLY LINE TO FRYER, OR POSSIBLE EXPLOSION COULD RESULT.**

2. Remove the control panel as discussed in Complete Control Panel Replacement Section.
3. Disconnect the pilot gas line fitting at the pilot assembly with a 1/2 inch wrench.
4. With a Phillips head screwdriver, remove the two screws securing the pilot assembly to the mounting bracket.
5. Remove the flame sensor wire from the flame sensor.
6. Follow the wire from the spark ignitor back to the module, and remove wire from module.
7. After removing assembly from unit, pull the flame sensor out of the bracket as discussed in section 6-7. Insert flame sensor into new pilot/ignitor assembly.
8. Reinstall the new pilot/ignitor assembly in reverse order. Be extremely careful not to cross thread the pilot gas line fitting.

## **2-9. IGNITOR MODULE**

During normal operation, the ignition modules send 24 volts to the ignitors and gas control valve. If a module does not sense a pilot flame, the module starts the ignition process again. But, if a pilot light goes out for longer than 10 seconds, or it goes out 3 times within 10 seconds, the module keeps the 24 volts from reaching the gas control valve. The burners shut down.

1. Remove electrical power supplied to the unit.

**To avoid electrical shock or property damage, move the POWER switch to OFF and disconnect main circuit breaker, or unplug cord at wall receptacle.**

2. Remove the control panel as discussed in Complete Control Panel Replacement Section.
3. Label and remove the wires at module.
4. Using a 3/8 inch nut driver, remove the keps nuts securing the module to the shroud.
5. Install new module in reverse order.

## **2-10. TRANSFORMER**

The transformer reduces voltage down to accommodate those components with low voltage.

1. Remove electrical power supplied to the unit.

**To avoid electrical shock or property damage, move the POWER switch to OFF and disconnect main circuit breaker, or unplug cord at wall receptacle.**

2. Remove the control panel as discussed in Complete Control Panel Replacement Section.
3. Squeeze on the wire connector at the I/O board assembly to disconnect the wires from the transformer.
4. Using a Phillips head screwdriver, remove the two screws securing the transformer to the shroud.
5. Install the new transformer in reverse order.

## **2-11. I/O POWER SUPPLY BOARD ASSEMBLY**

The input/output power supply board assembly distributes voltage to the various components in the fryer. The board also receives information from components in the fryer.

1. Remove electrical power supplied to the unit.

**To avoid electrical shock or property damage, move the POWER switch to OFF and disconnect main circuit breaker, or unplug cord at wall receptacle.**

2. Remove the control panel as discussed in Complete Control Panel Replacement Section.
3. Disconnect the wire assemblies from the board.
4. Using a nut driver or wrench, remove the four keps nuts securing the board to the shroud.
5. Install the new I/O board assembly in reverse order.

## **2-12. VACUUM SWITCH**

The vacuum switch senses the airflow from the induction blower. If the airflow is reduced below a set amount, the switch will open and the I/O board will cut power to the gas control valve, which will shut the pilot flame off.

1. Remove electrical power supplied to the unit.

**To avoid electrical shock or property damage, move the POWER switch to OFF and disconnect main circuit breaker, or unplug cord at wall receptacle.**

2. Remove the control panel as discussed in Complete Control Panel Replacement Section.
3. Remove the air hose from the vacuum switch.
4. Label and remove wires from vacuum switch.

## **2-12. VACUUM SWITCH** **(Continued)**

5. Using a Phillips head screwdriver, remove the screws securing the vacuum switch to the shroud.
6. Install the new vacuum switch in reverse order.

### **CAUTION**

*To avoid property damage, do not tamper with, or disassemble this component. It is set and sealed from the factory and is not to be adjusted.*

## **2-13. SPEAKER ASSEMBLY** **(Gas Units)**

The speaker assembly emits audible signals to let the operator know when cooking and hold times are finished.

1. Remove electrical power supplied to the unit.

**To avoid electrical shock or property damage, move the POWER switch to OFF and disconnect main circuit breaker, or unplug cord at wall receptacle.**

2. Remove the control panel as discussed in Complete Control Panel Replacement Section.
3. Using a Phillips head screwdriver, remove the four screws securing the speaker to the shroud.
4. Install new speaker in reverse order. When plugging connector into control board, be sure to align pins into connector correctly.

## **2-14. DRAIN MICROSWITCH**

Upon turning the drain handle, the drain microswitch circuit should open, cutting off the pilot flame. This will prevent the fryer from heating while shortening is being drained from the frypot.

1. Remove electrical power supplied to the unit.

**To avoid electrical shock or property damage, move the POWER switch to OFF and disconnect main circuit breaker, or unplug cord at wall receptacle.**

2. The following check should be made to determine if the drain microswitch is defective.
  - a. Remove the two screws securing the microswitch to the drain rod valve bracket.
  - b. Remove wires from the switch.
  - c. Check for continuity across the two outside terminals of the drain switch. If the circuit is open, the drain switch is defective. The circuit should only be opened by pressing on the actuator of the drain switch.
3. Replace switch in reverse order.

## **2-15. FILTER SWITCH**

1. Remove electrical power supplied to the unit.

**To avoid electrical shock or property damage, move the POWER switch to OFF and disconnect main circuit breaker, or unplug cord at wall receptacle.**

## **2-15. FILTER SWITCH (Continued)**

2. Remove the control panel above the switch.
3. Label and remove the wires from the switch. With test instrument, check across the terminals of the switch with the switch in the ON position, and then in the OFF position. With the switch in the ON position, the circuit should be closed. With the switch in the OFF position, the circuit should be open. If the switch checks defective, replace it by continuing with this procedure.
4. With wires removed from the switch, push in on tabs on the switch and remove switch from the panel.
5. Push new switch into panel and reconnect wires.

## **2-16. GAS CONTROL VALVE ASSEMBLY**

The gas control valve assembly controls the flow of gas to the pilot and the main burner. The valve has two 24 volt coils, which are regulated by terminals P and M on the valve. The C terminal is the common terminal. For gas flow to the pilot, 24 VAC must be present between the P and C terminals. For gas flow to the main burner, 24 VAC must be present between the M and C terminals.

**TO AVOID PERSONAL INJURY OR PROPERTY DAMAGE, BEFORE STARTING THIS PROCEDURE, MOVE THE MAIN POWER SWITCH TO THE OFF POSITION. DISCONNECT THE MAIN CIRCUIT BREAKERS AT THE CIRCUIT BREAKER BOX OR UNPLUG SERVICE CORD FROM WALL RECEPTACLE. TURN OFF THE MAIN GAS SUPPLY TO THE FRYER AND DISCONNECT AND CAP THE MAIN SUPPLY LINE TO FRYER, OR POSSIBLE EXPLOSION COULD RESULT.**

1. Remove control panel assembly.
2. Remove wires from gas control valve.

**2-16. GAS CONTROL VALVE  
ASSEMBLY  
(Continued)**

3. Using a 7/16 inch wrench, remove the pilot line from the gas control valve.

4. Using a 1 inch wrench, loosen the nut securing the main gas inlet line to the gas control valve.

5. Using 5/8 inch wrench, remove the two burner gas line fittings at the black tee fitting, located behind the control panel area.

6. Using a Phillips head screwdriver, remove the three screws securing the gas control valve bracket to the frame of the fryer behind the control panel area.

## **2-16. GAS CONTROL VALVE ASSEMBLY** **(Continued)**

7. With the bracket dropped down, remove the two screws behind the bracket securing the gas control valve to the bracket.
8. Install the new gas control valve in reverse order.

## **2-17. BLOWER MOTOR ASSEMBLY**

The blower motor assembly induces the draft for the burners. If the blower motor fails, the air switch will fail to close, causing an “E-20B” error code in the display.

1. Remove electrical power supplied to the unit.

**To avoid electrical shock or property damage, move the POWER switch to OFF and disconnect main circuit breaker, or unplug cord at wall receptacle.**

2. Remove screws securing the two rear covers to the unit.

3. Remove the wire cover from the blower motor housing.

**2-17. BLOWER MOTOR  
ASSEMBLY  
(Continued)**

4. Remove wire nuts connecting blower motor wires to wires in conduit.

5. Loosen conduit from blower motor.

6. Remove screws connecting flue to bracket in upper frame.

7. Remove screws connecting flue to blower.

## 2-17. BLOWER MOTOR ASSEMBLY (Continued)

8. Using 3/8 inch nut driver, remove nuts securing blower to the unit. Pull blower from unit.
9. Install new blower in reverse order.

## 2-18. HEATING ELEMENTS (ELECTRIC ONLY)

### **NOTICE**

Heating elements are available for 208 and 230 volts. Check data plate to determine correct voltage.

#### **Checkout:**

If the shortenings temperature recovery is very slow or at a slower rate than required, this may indicate defective heating element(s). An ohmmeter will quickly indicate if the elements are shorted or open.

1. Remove electrical power supplied to the frypot to be worked on.

To avoid electrical shock or property damage, move the POWER switch to OFF and disconnect main circuit breaker, or unplug cord at wall receptacle, to the frypot to be worked on. Be aware the other controls will have power.

2. Remove control panel.

## 2-18. HEATING ELEMENTS (ELECTRIC ONLY) (Continued)

3. Perform an ohm check on one element at a time, with wires disconnected from element. If the resistance is not within tolerance, replace the element.

Voltage	Wattage	Resistance Ohms (cold)
208	4800	9
230	4800	11

### Replacement:

#### **NOTICE**

Refer to figure 2-2.

1. Drain the shortening from the frypot.
2. Remove the high limit bulb holder from the heating element inside the frypot.
3. Remove the heating element wires from the terminals by removing the nuts and washers. Label each so it can be replaced on the new element in the same position.
4. Remove the bolts from the five element spreaders. The element spreaders will now pull off the elements.
5. Remove the brass nuts and washers which secure the ends of the elements through the frypot wall.
6. Remove the heating elements from the frypot as a group by lifting the far end and sliding them up and out toward the rear of the frypot.

#### **NOTICE**

Always install new rubber O-rings when installing heater elements.

7. Install new heating elements with the new O-rings, terminal end first at approximately a 45° angle, slipping the terminals through the front wall of the frypot.
8. Replace the brass nuts and washers on the element terminals. Tighten the brass nuts to 30 foot lbs. of torque.

**2-18. HEATING ELEMENTS  
(ELECTRIC ONLY)  
(Continued)**

Temperature Probe      Spreader

**Fig. 2-1**

9. Evenly space the element spreaders on the sides of the elements and reinstall bolts. Place the fifth spreader in the front of the elements as to protect the temperature probe. (Fig.6-1)
10. Replace the high limit bulb holder on the top element, and position the bulb between the top and second element midway from side to side, and tighten screw that holds the bulb in place.
11. Reconnect the wires to the appropriate terminal as labeled when they were removed.
12. Replace the front control panel.
13. Connect the power cord to the wall receptacle or close wall circuit breaker.

**CAUTION**

*Heating elements should never be energized without shortening in the frypot, or damage to the elements could result.*

14. Replace the shortening in the frypot.

**Fig. 2-2**

## **2-19. HEATING CONTACTORS (ELECTRIC ONLY)**

Each well of an electric fryer requires two switching contactors. The first in line is the primary contactor and the second in line is the heat contactor. When open, the primary contactor does not allow power to flow to the heat contactor. When closed, the primary supplies voltage to the heat contactor. When the heat contactor is open, no voltage is supplied to the heating elements. When the heat contactor closes, voltage is supplied to the heating elements.

### **Checkout (Power Removed)**

1. Remove electrical power supplied to the frypot to be worked on.

**Electromechanical  
CONTACTOR**

**Mercury Contactor**

To avoid electrical shock or property damage, move the POWER switch to OFF and disconnect main circuit breaker, or unplug cord at wall receptacle, to the frypot to be worked on. Be aware the other controls will have power.

2. Remove the control panel.

3. Perform a check on the contactor as follows:

### **ELECTROMECHANICAL CONTACTOR**

#### Test Points

#### Results

From 30 to 34	open circuit
From 31 to 35	open circuit
From 32 to 36	open circuit
From 33 to 37	ohm reading 5 to 6

### **MERCURY CONTACTOR**

#### Test Points

#### Results

From 30 to 34	open circuit
From 31 to 35	open circuit
From 32 to 36	open circuit
From 33 to 37	ohm reading 1700

Wires should be removed and labeled to obtain an accurate check of contactors.

**2-19. HEATING  
CONTACTORS  
(ELECTRIC ONLY)**  
**(Continued)**

**Checkout (Power Supplied)**

To avoid electrical shock, make connections before applying power, take reading, and remove power before removing meter leads. The following checks are performed with the wall circuit breaker closed and the main power switch in the ON position.

1. Re-apply power to unit and turn POWER switch ON.
2. Using illustrations from previous page, check voltage as follows:

**Test Points**

From terminal 34 to 35  
From terminal 35 to 36  
From terminal 34 to 36

**Results**

The voltage should read the same at each terminal

**Mercury Contactor Replacement:**

If either contactor is defective it must be replaced as follows:

To avoid electrical shock or property damage, move the POWER switch to OFF and disconnect main circuit breaker, or unplug cord at wall receptacle, to the frypot to be worked on. Be aware the other controls will have power.

1. Remove only the wires directly connected to the contactor being replaced. Label the wires for replacement.
2. Loosen the screws securing the contactor bracket to the shroud.
3. Remove the contactor from the bracket.
4. Reinstall in reverse order.

**2-19. HEATING  
CONTACTORS  
(ELECTRIC ONLY)**  
(Continued)

**2-20. SPEAKER ASSEMBLY**

**Electromechanical Contactor Replacement:**  
If either contactor is defective it must be replaced as follows:

To avoid electrical shock or property damage, move the POWER switch to OFF and disconnect main circuit breaker, or unplug cord at wall receptacle, to the frypot to be worked on. Be aware the other controls will have power.

1. Remove only the wires directly connected to the contactor being replaced. Label the wires for replacement.
2. Remove nuts securing the contactor to the shroud.
3. Remove the contactor from unit.
4. Reinstall in reverse order.

The speaker assembly emits audible signals to let the operator know when cooking and hold times are finished.

1. Remove electrical power supplied to unit.

To avoid electrical shock or property damage, move the POWER switch to OFF and disconnect main circuit breaker, or unplug cord at wall receptacle.

2. Remove control panel.
3. Follow the speaker wire and disconnect from control board.
4. Remove the screws securing the speaker bracket to the shroud.
5. Remove the speaker from the bracket.
6. Reinstall in reverse order.

## **2-21. HIGH TEMPERATURE LIMIT CONTROL (Electric Units)**

The electric units, model OFE-321/2/3/4, use the same high temperature control limits as the gas units, OFG-321/2/3/4, but the mounting of the capillary tube is different on the electric units compared to the gas units.

### **Checkout:**

Use the same procedure as in the High Limit Temperature Control (Gas) Section.

### **Replacement:**

**To avoid electrical shock or property damage, move the POWER switch to OFF and disconnect main circuit breaker, or unplug cord at wall receptacle, to the frypot to be worked on. Be aware the other controls will have power.**

1. Drain the shortening from the frypot.
2. Remove control panel.
3. Loosen small inside screw nut on capillary tube.
4. Remove capillary bulb from bulb holder inside the frypot.
5. Straighten the capillary tube.
6. Remove larger outside nut that threads into pot wall.
7. Remove the two screws that secure the high limit to the high limit bracket.
8. Remove the defective control from the control panel area.
9. Insert new control and replace screws.

**2-21. HIGH TEMPERATURE  
LIMIT CONTROL**  
**(Electric Units)**  
**(Continued)**

10. Uncoil capillary tube, starting at control, and insert through pot fitting.

**To avoid electrical shock or other injury, run the capillary line under and away from all electrical power wires and terminals. The tube must NEVER be in such a position where it could accidentally touch the electrical power terminals.**

11. Carefully bend the capillary bulb and tube toward bulb holder on heating elements.

12. Slip capillary bulb into bulb holder on heating elements.  
Pull excess capillary line from pot and tighten nut into frypot wall.

*Be sure capillary bulb of high limit is located behind capillary bulb of thermostat. Both capillary bulbs and bulb holders should be positioned as not to interfere with basket or when cleaning the frypot wall, or damage to capillary tube could result.*

13. With excess capillary line pulled out, tighten smaller nut hand tight, then  $\frac{1}{4}$  turn with wrench.

14. Replace front panel.

15. Refill with shortening.

1. Remove electrical power supplied to unit.

**To avoid electrical shock or property damage, move the power switch to OFF and disconnect main circuit breaker, or unplug cord at wall receptacle.**

2. Drain shortening from frypot.
3. Remove baskets and using a large, flat-head screwdriver, push the clevis pin through basket hanger. Using pliers, pull pin from assembly.

**2-22. AUTOLIFT ACTUATOR (MOTOR)  
REPLACEMENT(if applicable) (Continued)**

4. Remove rear cover.

5. Disconnect actuator connector and cut the wires from the other half of the connector, as shown at left. The new actuator wires do not have a connector on them and must be connected directly to the wires on the unit.

6. Using a 3/8 socket, remove the 3 nuts securing the bottom of the actuator bracket.

7. Remove trim strip from front of shroud.

8. Using a 15T torx driver, remove the 4 torx screws from the pair of actuators.

**2-22. AUTOLIFT**  
**ACTUATOR (MOTOR)**  
**REPLACEMENT**  
**(if applicable) (Continued)**

9. Remove the 2 front mounting screws from the actuator support plate.

10. Remove all the top screws, securing all the actuator support plates to the back shroud, to help loosen the back shroud.

11. Remove all remaining back shroud screws to loosen the back shroud from the unit.

12. Lift up on the entire back shroud assembly, enough to have the top of the actuator and bracket assembly to clear the top of the back shroud. Pull the top of the actuator and bracket assembly away from back shroud, as shown in Figure 10. Now, using a flat-blade screwdriver, push the clevis pin from the bracket and actuator and using pliers to pull the pin from the assembly. Actuator can now be removed from unit.

13. Reassemble in reverse order.

**2-23. AUTOLIFT  
TRANSFORMER  
REPLACEMENT  
(if applicable)**

1. Remove electrical power supplied to unit.

To avoid electrical shock or property damage, move the power switch to OFF and disconnect main circuit breaker, or unplug cord at wall receptacle.

2. Remove control panel.
3. Label and remove wires from transformer.
4. Using a Phillips-head screwdriver, remove the screws securing transformer to shroud and remove transformer from shroud.
5. Install new transformer in reverse order.

**2-24. AUTOLIFT PC BOARD  
REPLACEMENT  
(if applicable)**

1. Remove electrical power supplied to unit.

To avoid electrical shock or property damage, move the power switch to OFF and disconnect main circuit breaker, or unplug cord at wall receptacle.

2. Remove control panel
3. Disconnect connectors from PC board.

**2-24. AUTOLIFT PC BOARD  
REPLACEMENT  
(if applicable) (Continued)**

4. Using a Phillips-head screwdriver, remove the 2 screws holding the autolift PC board bracket to the frame and remove it from unit. (The right screw needs removed to disconnect the ground wire, but the left screw can be loosened as bracket slid forward to be removed through the slots.)

5. Using 5/16" nut-driver or wrench, remove the 4 nuts securing the autolift PC board to the bracket and remove PC board from bracket.
6. Install new panel in reverse order.

## LIMITED WARRANTY FOR HENNY PENNY EQUIPMENT

Subject to the following conditions, Henny Penny Corporation makes the following limited warranties to the original purchaser only for Henny Penny appliances and replacement parts:

**NEW EQUIPMENT:** Any part of a new appliance, except baskets, lamps, and fuses, which proves to be defective in material or workmanship within two (2) years from date of original installation, will be repaired or replaced without charge F.O.B. factory, Eaton, Ohio, or F.O.B. authorized distributor. Baskets will be repaired or replaced for ninety (90) days from date of original installation. Lamps and fuses are not covered under this Limited Warranty. To validate this warranty, the registration card for the appliance must be mailed to Henny Penny within ten (10) days after installation.

**FILTER SYSTEM:** Failure of any parts within a fryer filter system caused by the use of the non-OEM filters or other unapproved filters is not covered under this Limited Warranty.

**REPLACEMENT PARTS:** Any appliance replacement part, except lamps and fuses, which proves to be defective in material or workmanship within ninety (90) days from date of original installation will be repaired or replaced without charge F.O.B. factory, Eaton, Ohio, or F.O.B. authorized distributor.

The warranty for new equipment covers the repair or replacement of the defective part and includes labor charges and maximum mileage charges of 200 miles round trip for a period of one (1) year from the date of original installation.

The warranty for replacement parts covers only the repair or replacement of the defective part and does not include any labor charges for the removal and installation of any parts, travel, or other expenses incidental to the repair or replacement of a part.

**EXTENDED FRYPOT WARRANTY:** Henny Penny will replace any frypot that fails due to manufacturing or workmanship issues for a period of up to seven (7) years from date of manufacture. This warranty shall not cover any frypot that fails due to any misuse or abuse, such as heating of the frypot without shortening.

**0 TO 3 YEARS:** During this time, any frypot that fails due to manufacturing or workmanship issues will be replaced at no charge for parts, labor, or freight. Henny Penny will either install a new frypot at no cost or provide a new or reconditioned replacement fryer at no cost.

**3 TO 7 YEARS:** During this time, any frypot that fails due to manufacturing or workmanship issues will be replaced at no charge for the frypot only. Any freight charges and labor costs to install the new frypot as well as the cost of any other parts replaced, such as insulation, thermal sensors, high limits, fittings, and hardware, will be the responsibility of the owner.

Any claim must be presented to either Henny Penny or the distributor from whom the appliance was purchased. No allowance will be granted for repairs made by anyone else without Henny Penny's written consent. If damage occurs during shipping, notify the sender at once so that a claim may be filed.

THE ABOVE LIMITED WARRANTY SETS FORTH THE SOLE REMEDY AGAINST HENNY PENNY FOR ANY BREACH OF WARRANTY OR OTHER TERM. BUYER AGREES THAT NO OTHER REMEDY (INCLUDING CLAIMS FOR ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES) SHALL BE AVAILABLE.

The above limited warranty does not apply (a) to damage resulting from accident, alteration, misuse, or abuse; (b) if the equipment's serial number is removed or defaced; or (c) for lamps and fuses. THE ABOVE LIMITED WARRANTY IS EXPRESSLY IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING MERCHANTABILITY AND FITNESS, AND ALL OTHER WARRANTIES ARE EXCLUDED. HENNY PENNY NEITHER ASSUMES NOR AUTHORIZES ANY PERSON TO ASSUME FOR IT ANY OTHER OBLIGATION OR LIABILITY.

Revised 01/01/07

## SECTION 3. PARTS INFORMATION

### **3-1. INTRODUCTION**

This section lists the replaceable parts of the Henny Penny OFE/OFG- 32x Open Fryers.

### **3-2. GENUINE PARTS**

Use only genuine Henny Penny parts in your fryer. Using a part of lesser quality or substitute design may result in damage to the unit or personal injury.

### **3-3. WHEN ORDERING PARTS**

Once the parts that you want to order have been found in the parts list, write down the following information:

Item Number	<u>8</u>	Example:
Part Number	<u>31561</u>	
Description	<u>On/Off Switch</u>	

From the data plate, list the following information:

Product Number	<u>01400</u>	Example:
Serial Number	<u>0001</u>	
Voltage	<u>208</u>	

### **3.4 PRICES**

Your distributor has a price parts list and will be glad to inform you of the cost of your parts order.

### **3.5 DELIVERY**

Commonly replaced items are stocked by your distributor and will be sent to you when your order is received. Other parts will be ordered, by your distributor, from Henny Penny Corporation. Normally, these will be sent to your distributor within three working days.

### **3.6 WARRANTY**

All replacement parts (except lamps and fuses) are warranted for 90 days against manufacturing defects and workmanship. If damage occurs during shipping, notify the carrier at once so that a claim may be properly filed. Refer to warranty in the front of this manual for other rights and limitations.

### **3.7 RECOMMENDED SPARE PARTS FOR DISTRIBUTORS**

Recommended replacement parts, stocked by your distributor, are indicated with ✓ in the parts lists. Please use care when ordering recommended parts, because all voltages and variations are marked. Distributors should order parts based upon common voltages and equipment sold in their territory.

**OFX-323 Optional Direct-Connect Parts**

ITEM NO.	PART NO.	DESCRIPTION	QTY. PER UNIT
	14857	KIT - DIRECT-CONNECT OFX-323 (12/1/06 & AFTER)	1
	14368	KIT - DIRECT-CONNECT OFX-323 (BEFORE 12/1/06)	1
1	21613	VALVE - DIVERTER	1
2	17407	CONNECTOR - 1/2 MALE ELBOW	1
3	24692	ASSY. - D.C. OFX-32X DISCARD TUBE	1
4	SC03-005	SCREW - SD #8 X 1/2 PH PHD	2
5	21509	BRACKET - TUBE	1
6	24695	ASSY. - D.C. OFX-323 & 322 HOSE	1
6	21753	. HOSE - SHORTENING DISCARD	1
7	FP01-089	. BUSHING-REDUCING 3/4M TO 1/2F BL	1
8	21800	. VALVE - 3/4 CHECK	1
9	16807	. FITTING - CONNECTOR - MALE	3
10	21612	. DISCONNECT - FEMALE	1
11	21611	DISCONNECT - MALE	1
12	24922	ASSY. - D.C. OFX-323 FILTER TUBE	1
13b	73191	ASSY. - D.C. OFX-323 RETURN TUBE (12/1/06 & AFTER)	1
13a	24923	ASSY. - D.C. OFX-323 RETURN TUBE (BEFORE 12/1/06)	1
13a	24889	. TUBE-D.C. OFX-32X RETURN	1
14	FP01-082	. CONNECTOR - 3/8 TUBE TO 1/2 NPT SS	1
15	21439	HANDLE - DIVERTER VALVE	1

OFX-322 Optional Direct-Connect Parts

ITEM NO.	PART NO.	DESCRIPTION	QTY. PER UNIT
	14858	KIT – DIRECT-CONNECT OFX-322 (12/1/06 & AFTER)	1
	14367	KIT – DIRECT-CONNECT OFX-322 (BEFORE 12/1/06)	1
1	21439	HANDLE – DIVERTER VALVE	1
2	21613	VALVE - DIVERTER	1
3	17407	CONNECTOR – 1/2 MALE ELBOW	2
4	24692	ASSY. – D.C. OFX-32X DISCARD TUBE	1
5	SC03-005	SCREW – SD #8 X 1/2 PH PHD	2
6	21509	BRACKET - TUBE	1
7	24691	ASSY. – D.C. OFX-322 & 324 FILTER TUBE	1
8	21611	DISCONNECT – MALE	1
9	24695	ASSY. – D.C. OFX-323 & 322 HOSE	1
9	21753	. HOSE – SHORTENING DISCARD	1
10	21800	. VALVE – 3/4 CHECK	1
11	FP01-089	. BUSHING-REDUCING 3/4M TO 1/2F BL	1
12	21612	. DISCONNECT – FEMALE	1
13	16807	. FITTING – CONNECTOR – MALE	2
14	73243	ASSY. – D.C. OFX-322 & 324 RETURN TUBE(12/1/06 & after)	1
14	24694	ASSY. – D.C. OFX-322 & 324 RETURN TUBE (Before 12/1/06)	1
14	21739	. TUBE-D.C. OFX-32X RETURN	1
15	FP01-082	. CONNECTOR – 3/8 TUBE TO 1/2 NPT SS	1

OFX-324 Optional Direct Connect Parts

ITEM NO.	PART NO.	DESCRIPTION	QTY. PER UNIT
14859		KIT - DIRECT-CONNECT OFX-324 (12/1/06 & AFTER)	1
14364		KIT - DIRECT-CONNECT OFX-324 (BEFORE 12/1/06)	1
1	21439	HANDLE - DIVERTER VALVE	2
2	21613	VALVE - DIVERTER	2
3	17407	CONNECTOR - 1/2 MALE ELBOW	4
4	21509	BRACKET - TUBE	2
5	SC03-005	SCREW - SD #8 X 1/2 PH PHD	4
6	24713	ASSY. - D.C. OFX-324 DISCARD - LH TUBE	1
6	24714	ASSY. - D.C. OFX-324 DISCARD - RH TUBE	1
7	24715	ASSY. - D.C. OFX-324 HOSE	1
7	21753	. HOSE - SHORTENING DISCARD	1
8	FP01-089	. BUSHING-REDUCING 3/4M TO 1/2F BI	2
9	21612	. DISCONNECT - FEMALE	1
10	16282	. NIPPLE - 3/4 X CLOSE	2
11	FP01-097	. TEE-3/4 NPT FEMALE PIPE BI	1
12	16807	. FITTING - CONNECTOR - MALE	4
13	21800	. VALVE - 3/4 CHECK	2
14	21611	DISCONNECT - MALE	1
15	24691	ASSY. - D.C. OFX-322 & 324 FILTER TUBE	1
16	73254	ASSY. - D.C. OFX-322 & 324 RETURN TUBE(12/1/06 & after)	1
16	24694	ASSY. - D.C. OFX-322 & 324 RETURN TUBE (Before 12/1/06)	1
16	21739	. TUBE-D.C. OFX-32X RETURN	1
17	FP01-082	. Connector - 3/8 tube to 1/2 NPT SS	1

**OFX-321 Optional Direct Connect Parts**

ITEM NO.	PART NO.	DESCRIPTION	QTY. PER UNIT
	<a href="#">14625</a>	KIT - DIRECT-CONNECT - OFX-321	1
1	<a href="#">21439</a>	HANDLE - DIVERTER VALVE	1
2	67493	ROD - D/C EXTENSION	1
3	<a href="#">SC03-005</a>	SCREW - SD #8 X 1/2 PH PHD	2
4	67671	BRACKET - EXTENSION ROD	1
5	<a href="#">PN01-001</a>	PIN - COTTER - 3/32 X 1-1/4 S	1
6	<a href="#">FP01-088</a>	ELBOW - STREET - 1/2 X 90 BL IRON	1
7	67662	ASSY. - DIRECT-CONNECT HOSE - 321	1
7	21753	. HOSE - SHORTENING DISCARD	1
8	21800	. VALVE - 3/4 CHECK	1
9	<a href="#">FP01-089</a>	. BUSHING-REDUCING 3/4M TO 1/2F BI	1
10	<a href="#">FP01-023</a>	. NIPPLE - 1/2 INCH CLOSE BLACK	1
11	21612	. DISCONNECT - FEMALE	1
12	21611	DISCONNECT - MALE	1
13	67672	ASSY - TUBE POT TO PUMP - OFG-321	1
13	67674	ASSY - TUBE POT TO PUMP - OFE-321	1
14	<a href="#">17407</a>	CONNECTOR - 1/2 MALE ELBOW	1
15	21613	VALVE - DIVERTER	1
16	67492	STOP - D/C EXTENSION ROD	1
17	<a href="#">FP01-023</a>	NIPPLE - 1/2 INCH CLOSE BLACK	1
18*	<a href="#">FP01-015</a>	PLUG - PIPE	1

### Computron 1000 Parts

PART NO. ITEM NO.	DESCRIPTION	QTY. PER CONTROL
14939	COMPUTRON 1000 CONTROL PANEL	1
14940	KIT-OFG32X E/M TO C1000 RETROFIT	1
140072	KIT-OFE32X E/M TO C1000 RETROFIT	1
140073	KIT-OFE32X C1000 TO C8000 FULL	1
140074	KIT-OFE30X C1000 TO C8000 SPLIT	1
140074	KIT-OFG32X C1000 TO C8000 FULL	1
✓ 1	14990 KIT - C1000 FULL PROBE	1
✓ 1	14991 KIT - C1000 SPLIT PROBE	1
2	NS02-005 NUT - HEX KEPS - #6-32 C	11
✓ 3	60536 ASSY - TRANSFORMER - 24V/230V	1
✓ 3	60207 ASSY - TRANSFORMER - 24V/120V	1
✓ 4	14949 ASSY - CONTROL - C1000	1
✓ 5	ME70-005 SPEAKER - 16 OHM - 2 INCH	1
6	77648 COVER - PCB	1
7	76817 DECAL - C1000 - CONTROL - GM	1
✓ 8*	MS01-571 TOOL - EXTRACTOR (PROBE)	1
